couasnon@irisa.fr

- Difficulties of Feature Extraction
- Feature Extraction/Detection on the whole Signal
- Feature Extraction/Detection on Objects
 - ◆ Object Localization / Extraction
 - ✦ Region Labeling
 - ✦ Edge Detection
 - ✦ Connected Components Labeling
 - ✦ Skeletonization
 - ✦ Handwriting extraction
 - ✦ Line-Segment Detection
 - ◆ Object Characterization
- Interest of Multi-Resolution
- Using Features

- 1) Notion of Edge
- 2) Derivative Filters
- 3) Edge Point Selection
- 4) Laplacian Filter

1) Notion of Edge: Subjective Edges

1) Notion of Edge: Subjective Edges

1) Notion of Edge: Cultural Edges

1) Notion of Edge: Cultural Edges

133

1) Notion of Edge: Cultural Edges

■ Variation importante de luminosité

◆ Sélection des pixels

◆ Suivi de contour

◆ Affinage des contours

1) Notion of Edge: Approche continue

136

Contour idéal

Contour réel

■ Gradient de la luminosité

$$\nabla lum(x, y) = \left(\frac{\partial}{\partial x} lum, \frac{\partial}{\partial y} lum \right)$$

- Roberts
- Prewitt
- Sobel
- Filtre dérivateur (-1, 0, 1)
- Filtre récursif de Shen et Castan

■ Décomposition suivant les diagonales

◆ 1ère diagonale $= \begin{bmatrix} 0 & -1 \\ 1 & 0 \end{bmatrix}$

◆ 2nde diagonale $= \begin{bmatrix} -1 & 0 \\ 0 & 1 \end{bmatrix}$

◆ calcul du module sur 4 points

$$\begin{array}{cc} a & b \\ c & d \end{array} \Rightarrow |a - d| + |b - c|$$

2) Derivative Filters: Roberts : module

139

■ Prewitt

$$g_x = \begin{bmatrix} -1 & 0 & 1 \\ -1 & 0 & 1 \\ -1 & 0 & 1 \end{bmatrix} \quad g_y = \begin{bmatrix} 1 & 1 & 1 \\ 0 & 0 & 0 \\ -1 & -1 & -1 \end{bmatrix}$$

■ Décomposition de g_x :

- ◆ **Filtre dérivateur en ligne** $(-1 \ 0 \ 1)$
- ◆ **Filtre passe-bas en colonne** $(1 \ 1 \ 1)$

2) Derivative Filters: Prewitt : module

141

2) Derivative Filters: Prewitt : direction

142

■ Sobel

$$g_x = \begin{bmatrix} -1 & 0 & 1 \\ -2 & 0 & 2 \\ -1 & 0 & 1 \end{bmatrix} \quad g_y = \begin{bmatrix} 1 & 2 & 1 \\ 0 & 0 & 0 \\ -1 & -2 & -1 \end{bmatrix}$$

■ Décomposition de g_x :

- ◆ Filtre dérivateur en ligne $(-1 \ 0 \ 1)$
- ◆ Filtre passe-bas en colonne $(1 \ 2 \ 1)$

2) Derivative Filters: Sobel : module

144

2) Derivative Filters: Sobel : direction

145

2) Derivative Filters: (-1, 0, 1)

- Saut de luminosité
- Réponse non nulle sur 2 points

2) Derivative Filters: (-1, 0, 1)

147

- Rampe de luminosité : 1 intermédiaire
- Réponse non nulle sur 3 points

2) Derivative Filters: (-1, 0, 1)

- Rampe de luminosité : 2 intermédiaires
- Réponse non nulle sur 4 points
- Affaiblissement de la dérivée

- Balayage de gauche à droite $s_n = a.e_n + b.s_{n-1}$
- Passe-bas $s_n = s_{n-1} + a(e_n - s_{n-1})$
- Exemple avec $a = 0,5$

- De gauche à droite $g_n = g_{n-1} + a(e_n - g_{n-1})$
- De droite à gauche $d_n = d_{n+1} + a(e_n - d_{n+1})$
- Différence $s_n = norm * (d_n - g_n)$

2) Deriv. Filters: Shen & Castan Recursive Filter

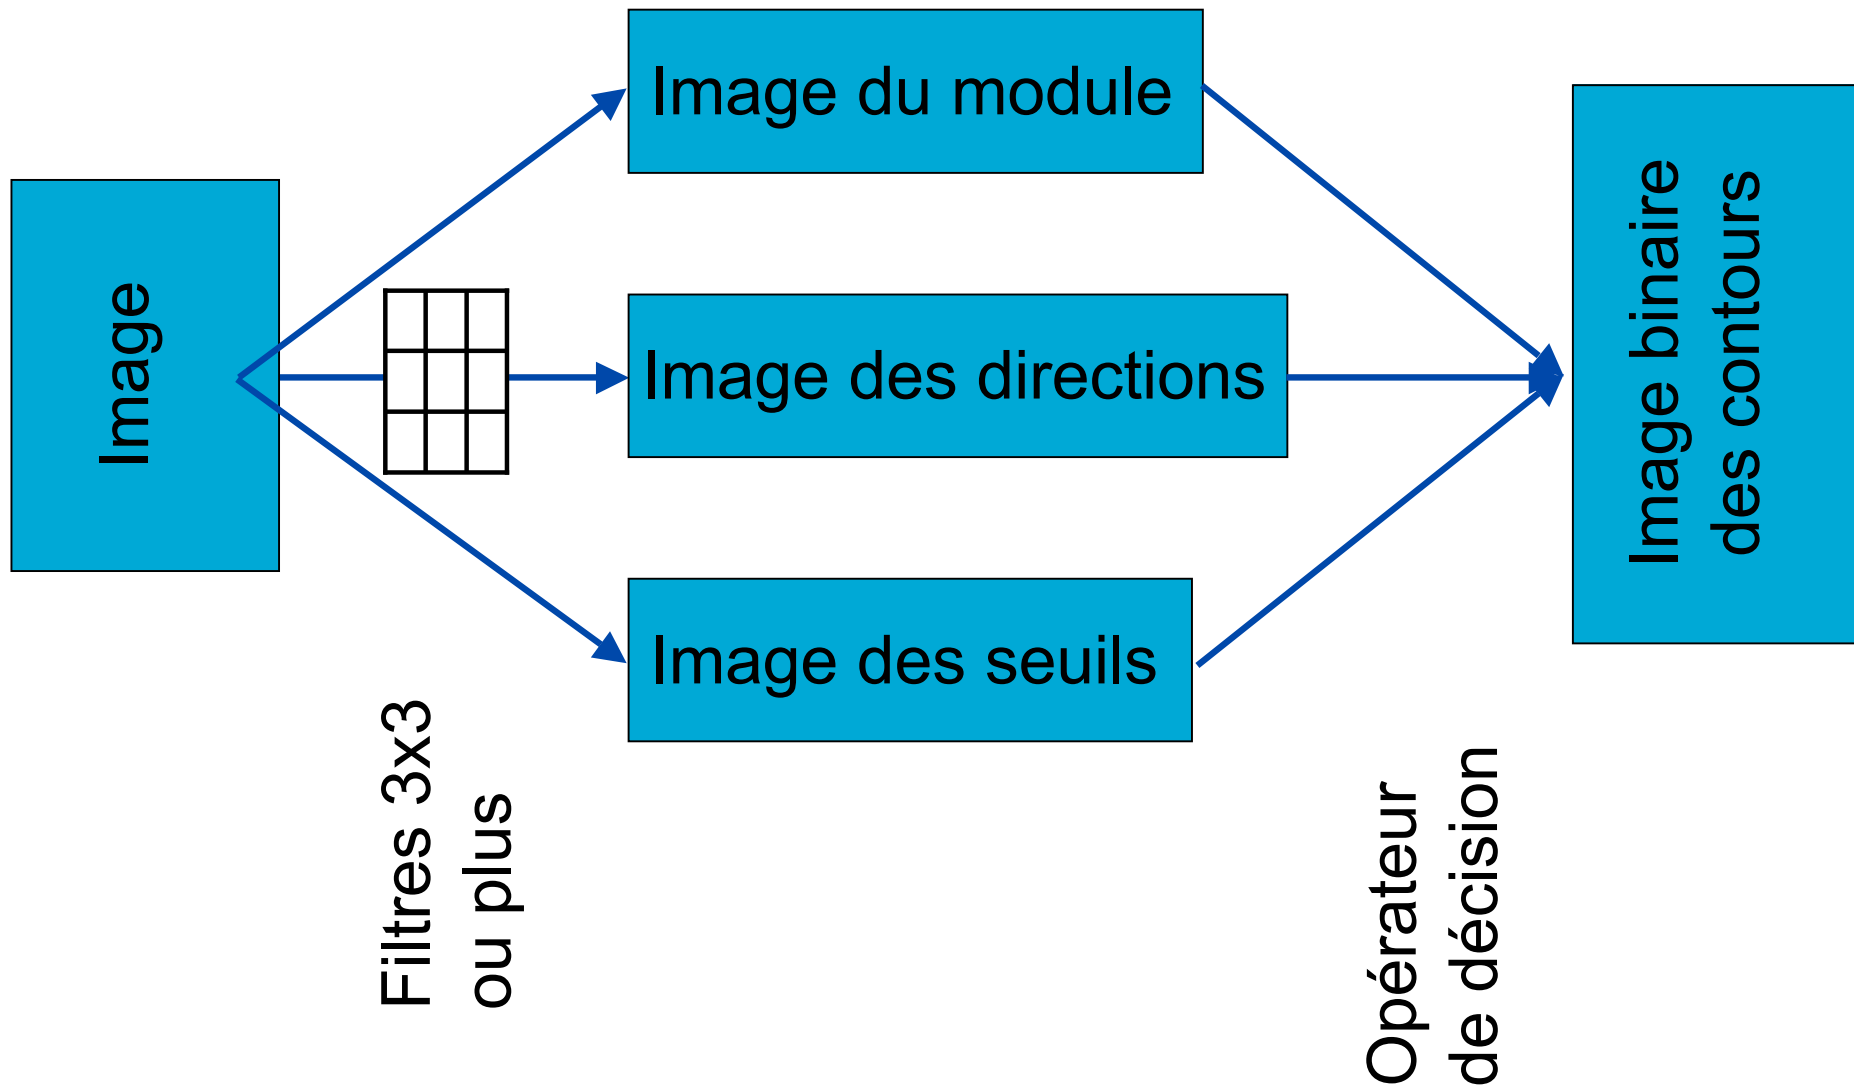

151

3) Edge Point Selection

- Image binaire de points contours
 - ◆ Schéma général
 - ◆ Ajustement de masques
 - ◆ Binarisation
- Propriétés :
 - ◆ Lignes fines
 - ◆ Fermeture des contours
- Connexion des points du contour

3) Edge Point Selection

3) Edge Point Selection: Binarization

- **Comparaison du module à un seuil**
 - ◆ Local ou global ?
- **Valeur du seuil**
 - ◆ Trop bas = épaissement
 - ◆ Trop haut = mitage

- Seuil à 20
 - ◆ Epaississement
 - => Affinage des contours

- Seuil à 40
 - ◆ Mitage
 - => Fermeture des contours

- Introduction à une dimension
- Utilisation de filtres 2D
- Dérivation du gradient
- Coopération gradient laplacien

4) Laplacian Filter: Introduction à une dimension 158

- Contour = valeur importante de la dérivée
- Seuillage = épaissement des contours
- Recherche du maximum de la dérivée
- Passage par 0 de la dérivée seconde, bruit

Détection de contour

■ Laplacien :
$$= \frac{\partial^2}{\partial x^2} lum + \frac{\partial^2}{\partial y^2} lum$$

■ Approximations
$$\begin{bmatrix} 0 & 1 & 0 \\ 1 & -4 & 1 \\ 0 & 1 & 0 \end{bmatrix} \quad \begin{bmatrix} 1 & 1 & 1 \\ 1 & -8 & 1 \\ 1 & 1 & 1 \end{bmatrix} \quad \begin{bmatrix} 1 & -2 & 1 \\ -2 & 4 & -2 \\ 1 & -2 & 1 \end{bmatrix}$$

■ Propriétés

- ◆ Somme des coefs = 0
- ◆ Décomposition ?

4) Laplacian Filter: Laplacien 1

160

4) Laplacian Filter: Laplacien 2

161

4) Laplacian Filter: Laplacien 3

162

- Gradient de Shen et Castan avec $a=0,5$
- $g_x(x+1, y) - g_x(x-1, y) + g_y(x, y+1) - g_y(x, y-1)$

- Gradient de Shen et Castan avec $a=0,25$
- $g_x(x+1, y) - g_x(x-1, y) + g_y(x, y+1) - g_y(x, y-1)$

4) Laplacian Filter: Influence de a

- Taille de la région autour du tracé
- Petite boucle 
- Instabilité de la séparation 

- Fort gradient
- Passage par zéro
 - ◆ Points clairs

- Fort gradient
- Passage par zéro
 - ◆ Points sombres

- Courbe = liste des directions
invariance/origine

- Codage de Freeman

- Calcul de propriétés de la courbe
à partir du codage :
surface, barycentre, ...

- Difficulties of Feature Extraction
- Feature Extraction/Detection on the whole Signal
- Feature Extraction/Detection on Objects
 - ◆ Object Localization / Extraction
 - ✦ Region Labeling
 - ✦ Edge Detection
 - ✦ Connected Components Labeling
 - ✦ Skeletonization
 - ✦ Handwriting extraction
 - ✦ Line-Segment Detection
 - ◆ Object Characterization
- Interest of Multi-Resolution
- Using Features

■ Neighborhood

■ 4 neighbors

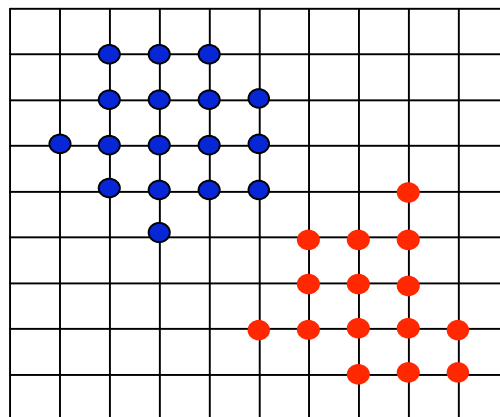

■ 8 neighbors

■ Path

◆ 4|8 path from a to b

- ✦ Series of 4|8 adjacent points a, \dots, b

- Two points a and b are 4|8 connected in S
 - ◆ There is a 4|8 path from a to b in S
 - ◆ are 4|8 connected is a biconditional relation
- Biconditional Classes =
Connected Components
- Connected Component Represents
 - ◆ Objects
 - ◆ Part of Objects
 - ◆ Several Objects

■ Example of Algorithm (4-connectedness)

- ◆ Raster Scan: left to right, top to bottom
- ◆ Define the label of the current pixel (**p**) if $p=1$
 - ✦ Depends of the up (**u**) and left (**l**) pixels

	u	
l	p	

	u=0	u=1
Label(p)=	l=0	l=1
	New label	Label(u)
	Label(l)	Label(u)
		Equivalence Table: Label(l) equiv. to Label(u)

- ◆ Find the lowest label for each equivalence set in the equivalence table.
- ◆ Scan the picture. Replace each label by the lowest label in its equivalence set.

■ Example of Result

- Features can be computed during labeling
- Each feature is associated to a label in the Equivalence Table
 - ◆ Current pixel is labeled
 - ◆ Features associated are modified
- Example of features
 - ◆ Bounding box ($\min(x)$, $\min(y)$, $\max(x)$, $\max(y)$)
 - ◆ Number of Black Pixels
 - ✦ Zeroth-order moment of the object
 - ◆ Center of Gravity
 - ✦ First-order moment of the object
 - ◆ Object Orientation (orientation of its greatest elongation)
 - ✦ Axis of the second-order moment of the object
 - ◆ ...
- Feature Standardization

- Difficulties of Feature Extraction
- Feature Extraction/Detection on the whole Signal
- Feature Extraction/Detection on Objects
 - ◆ Object Localization / Extraction
 - ✦ Region Labeling
 - ✦ Edge Detection
 - ✦ Connected Components Labeling
 - ✦ Skeletonization
 - ✦ Handwriting extraction
 - ✦ Line-Segment Detection
 - ◆ Object Characterization
- Interest of Multi-Resolution
- Using Features

■ Objective

- ◆ Reduce a shape as a one pixel thin shape

■ Principle

- ◆ Fire Front Propagation
- ◆ Median Axis

■ Examples

- Examples of different methods

- Discrete Distance to the border
 - ◆ [Rozenfeld & Pfaltz 1966]

- Thinning by Erosion

- ◆ [Pavlidis 1980]

- Thinning by Erosion

- ◆ [Zhang & Suen 1984]

- Thinning by Erosion

- ◆ Mathematical Morphology: [Chermant 1985] 8-connectedness

- 300 different methods in 1990
- Very sensible to noise

- Non stable representation (rotation...)
- Skeleton
 - ◆ Meaningful on linear objects
 - ◆ Non-linear Objects?

- Difficulties of Feature Extraction
- Feature Extraction/Detection on the whole Signal
- Feature Extraction/Detection on Objects
 - ◆ Object Localization / Extraction
 - ✦ Region Labeling
 - ✦ Edge Detection
 - ✦ Connected Components Labeling
 - ✦ Skeletonization
 - ✦ Handwriting extraction
 - ✦ Line-Segment Detection
 - ◆ Object Characterization
- Interest of Multi-Resolution
- Using Features

- **Off-line handwriting**
- **Skeleton**
 - ◆ **Not well adapted to handwriting**
- **Idea**
 - ◆ **Using median axis for linear elements**
 - ◆ **No decision on non-linear elements**
- **Two areas for handwriting extraction**
 - ◆ **Regular areas**
 - ◆ **Singular areas**

■ Recovering writing order

◆ Graph Representation

■ Recovering writing order - Difficulties

■ Detection of specific feature points

◆ Maxima, Inflexion, Turn back

◆ Intersection

■ Non-stable Points

◆ Use them for over-segmentation

Multiple Segmentation Hypothesis

	Courbe	Hypothèses de segmentation
Point de rebroussement		
Point anguleux		
Point multiple, boucle simple de sens direct		
Point multiple, boucle simple de sens rétrograde		

On-Line Signal Segmentation

Point Regular stroke Link

			invisibles

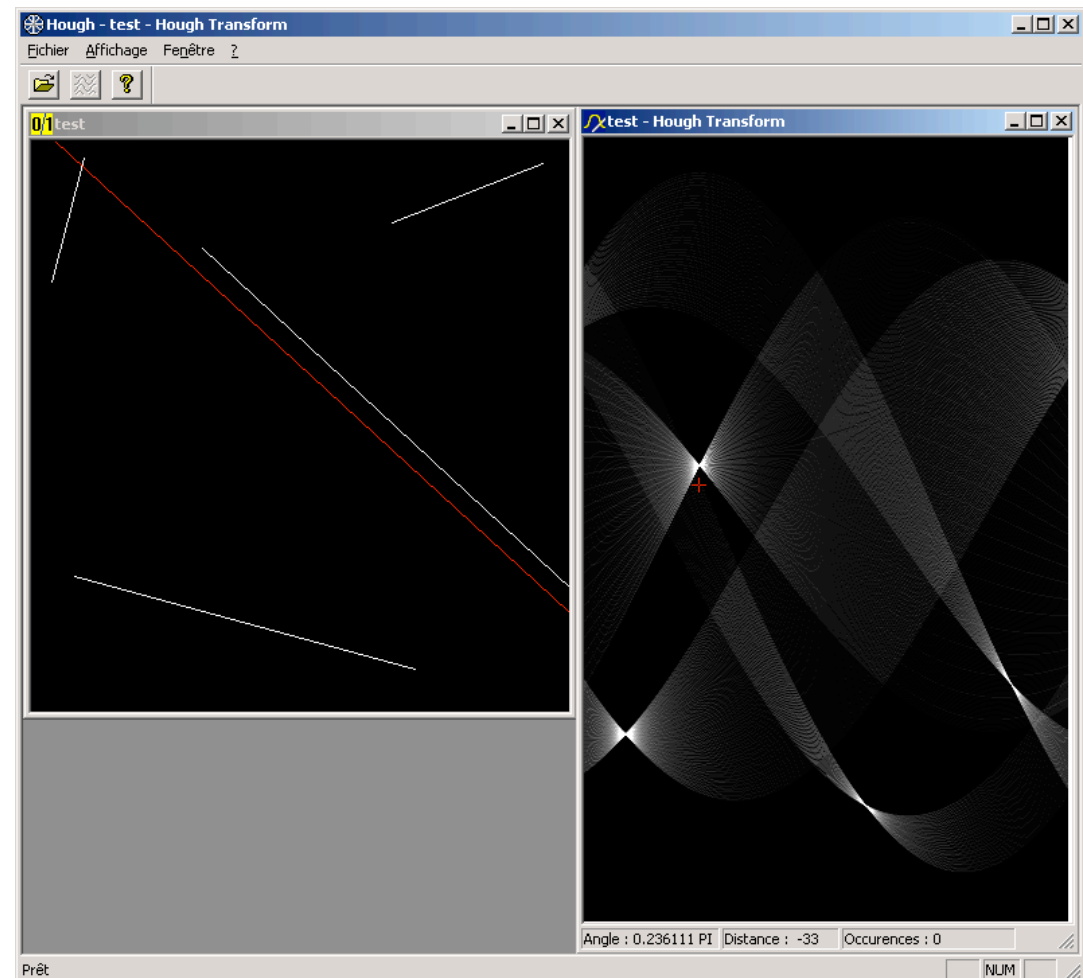

- Difficulties of Feature Extraction
- Feature Extraction/Detection on the whole Signal
- Feature Extraction/Detection on Objects
 - ◆ Object Localization / Extraction
 - ✦ Region Labeling
 - ✦ Edge Detection
 - ✦ Connected Components Labeling
 - ✦ Thinning
 - ✦ Handwriting extraction
 - ✦ Line-Segment Detection
 - ◆ Object Characterization
- Interest of Multi-Resolution
- Using Features

■ Hough Transform (1962)

- ◆ Parametric Representation Space (ρ, θ) in each point correspond the number of pixels found on this line

◆ Problems

- ◆ Non-straight line-segment
- ◆ Strong gaps
- ◆ Noise

■ Kalman Filtering Method

■ Define a Line-Segment Model

- ◆ Thickness
- ◆ Slope
- ◆ Position
- ◆ Noise

■ Prediction on a column

■ Verification on the next column

Line-Segment Detection

- **Difficulties of Feature Extraction**
 - ◆ Segmentation
 - ◆ Recognition in Images
 - ◆ Recognition in Document Images
- **Feature Extraction/Detection on the whole Signal**
 - ◆ Global Descriptor
 - ◆ Local Descriptor
- **Feature Extraction/Detection on Objects**
 - ◆ Object Localization / Extraction
 - ◆ Object Characterization
- **Interest of Multi-Resolution**
- **Using Features**

■ Objective

- ◆ Features for Object Recognition
- ◆ Input of Classification Systems

■ Features compute on

- ◆ Edges
- ◆ Skeleton
- ◆ Segmented Object Image
 - ◆ Binary Image
 - ◆ Grey-Level Image
 - ◆ Color Image
 - ◆ Made of one or several Components (result of segmentation)

■ Examples of Features

- ◆ Moments (see connected components)
- ◆ Progressive decomposition using elliptic Fourier (on edges)

- ◆ Zernike moments (on image)

■ Examples of Features

◆ Zoning

◆ Compute Features in each zone

◆ Average Grey Level

◆ Holes and Hollows

◆ Horizontal and Vertical Projection Histogram

■ Off-line Handwriting

◆ Features compute on

- ◆ Part of letters

- ◆ Sliding window in a word

- ◆ Word

■ Examples of On-Line Handwriting Features

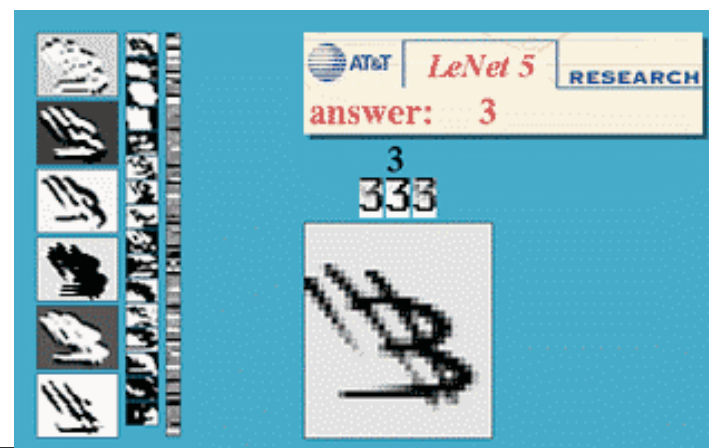

- ◆ Relative positions of beginning and ending of strokes
- ◆ Average curve openness
- ◆ Relative size along vertical axis
- ◆ ...

■ Don't forget Standardization!

- Learning Features and Classification
- Example: Neural Network Architecture
 - ◆ Convolutional Network LeNet 7 [LeCun]
 - Input: Image ; Output: Recognized Class

- ◆ Character Recognition (LeNet 5)

■ Example

◆ Convolutional Network LeNet 7 [LeCun]

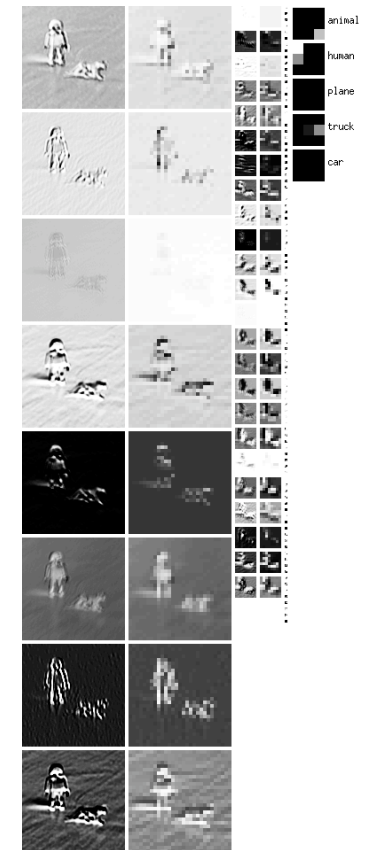

◆ Object Recognition/localization (Here 5 classes)

◆ Face Detection

Internal State of the Convolutional Network

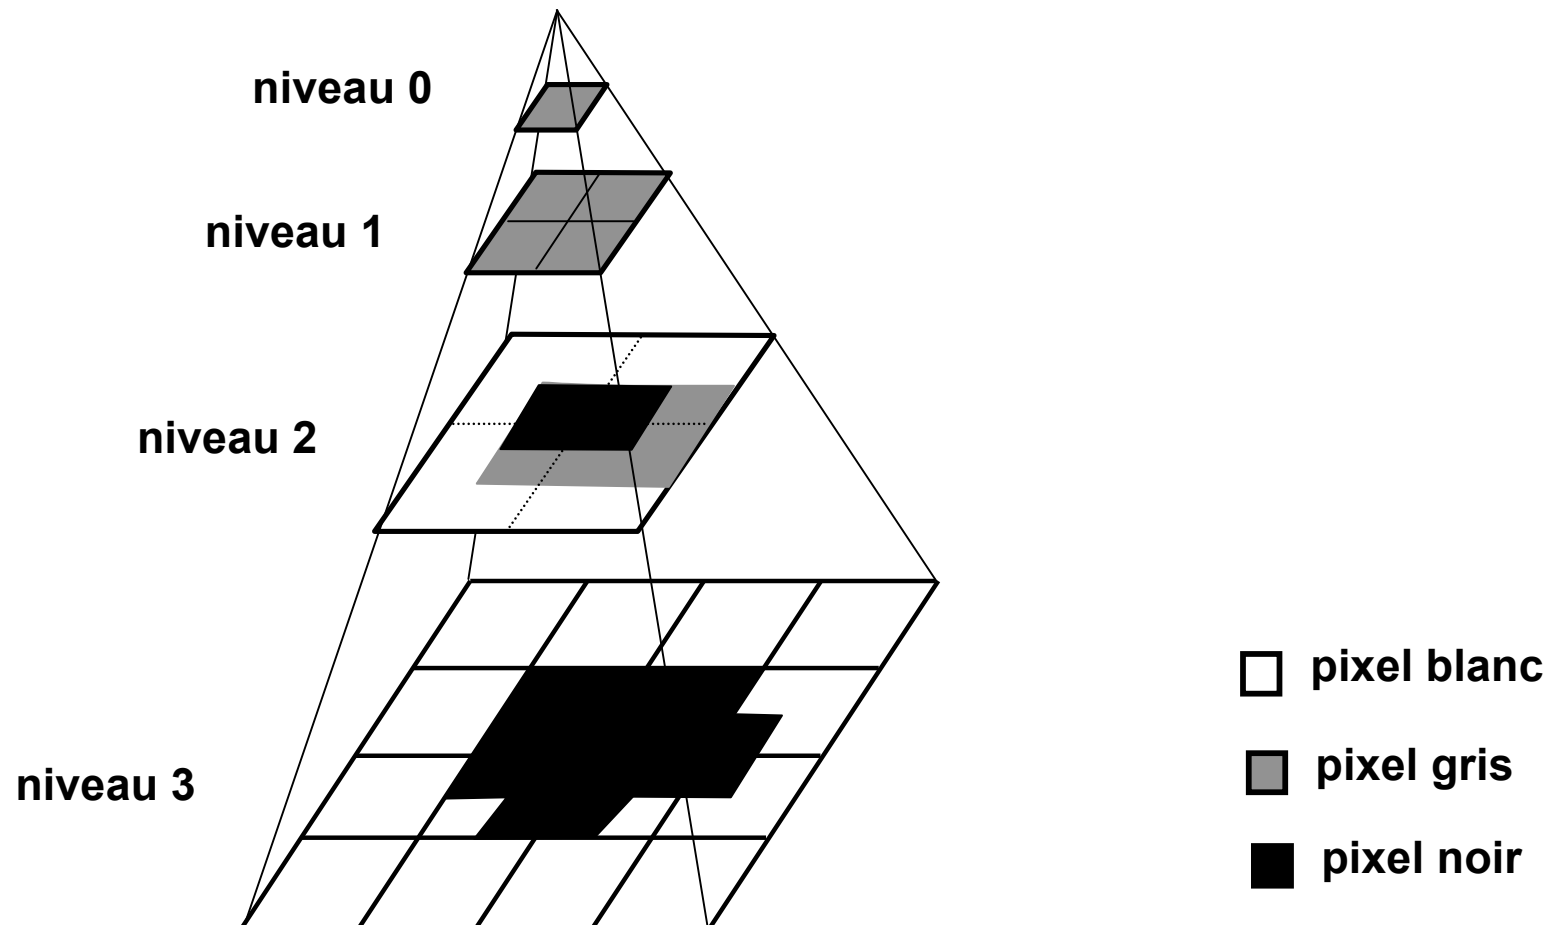

- **Difficulties of Feature Extraction**
 - ◆ Segmentation
 - ◆ Recognition in Images
 - ◆ Recognition in Document Images
- **Feature Extraction/Detection on the whole Signal**
 - ◆ Global Descriptor
 - ◆ Local Descriptor
- **Feature Extraction/Detection on Objects**
 - ◆ Object Localization / Extraction
 - ◆ Object Characterization
- **Interest of Multi-Resolution**
- **Using Features**

■ Multi-resolution

■ Sizes

- ◆ 512x512
- ◆ 256x256
- ◆ 128x128
- ◆ 64x64
- ◆ 32x32
- ◆ 16X16
- ◆ 8x8

256x256

128x128

128x128

64x64

64x64

■ Computation Time

- ◆ This is not more the real interest

■ Perceptive interest

- ◆ To extract different element at different level
- ◆ Far Vision
 - ✦ Global
- ◆ Close Vision
 - ✦ Details
- ◆ Same Feature does not represent the same thing
 - ✦ Depends on Image Level

■ Example

Resolution -16

Line segment extraction: part of text lines

Resolution -8

Line segment extraction: part of words

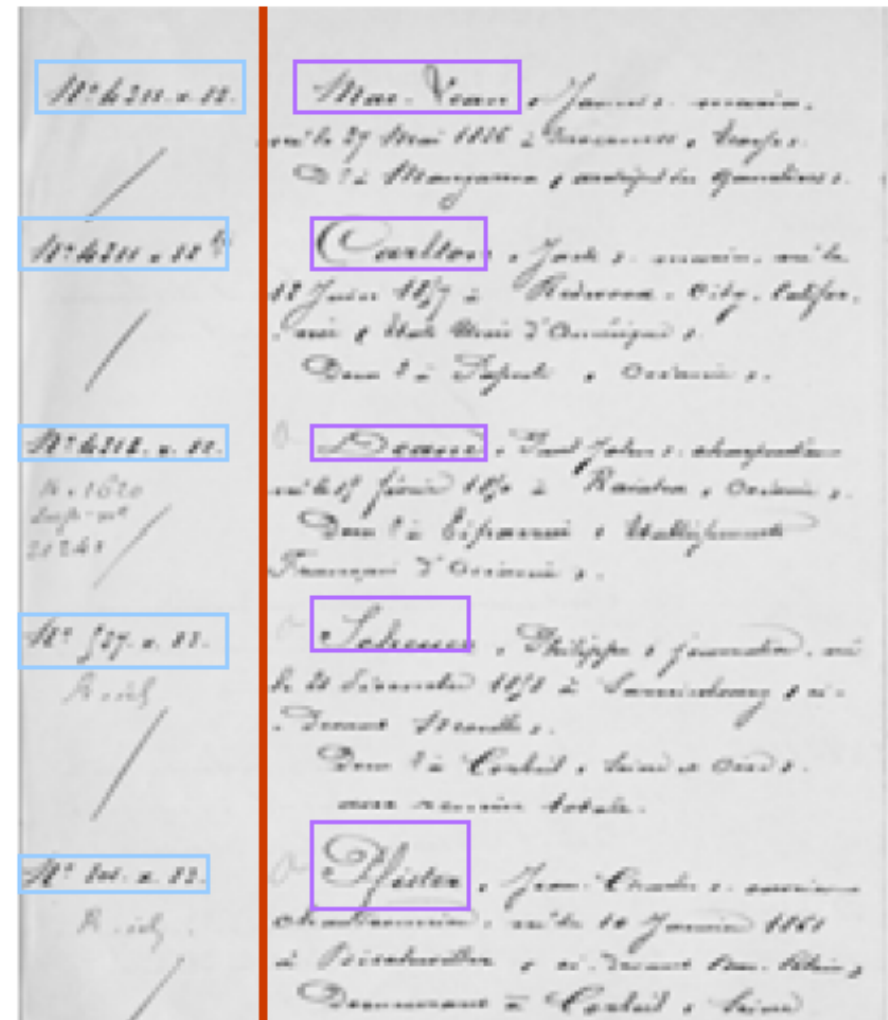

High Resolution

■ Structure at low Resolution

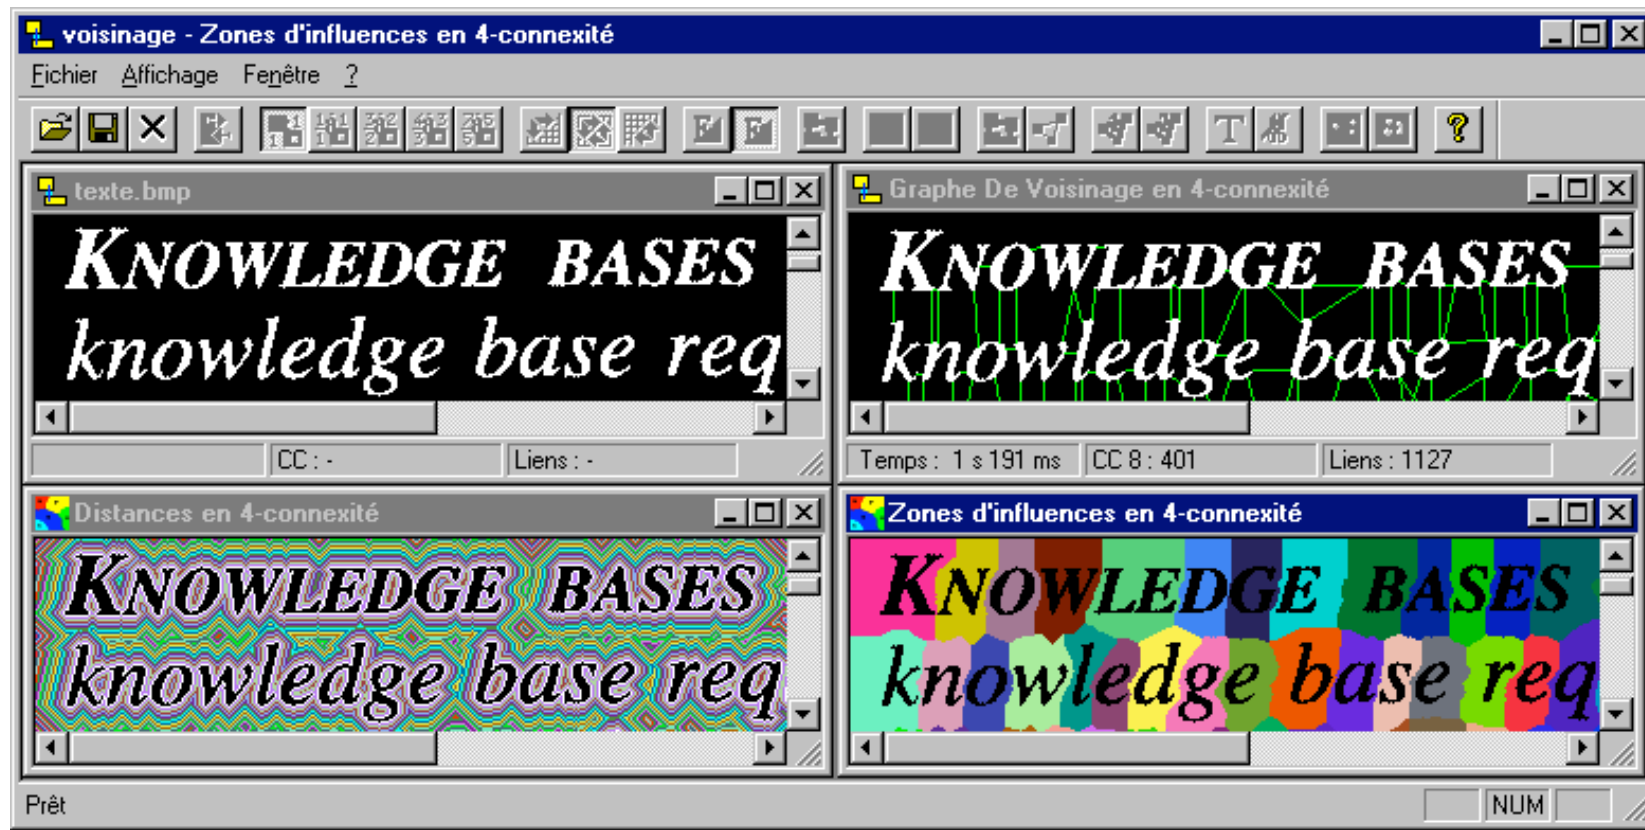

■ Word Localization at High Resolution

- **Difficulties of Feature Extraction**
 - ◆ Segmentation
 - ◆ Recognition in Images
 - ◆ Recognition in Document Images
- **Feature Extraction/Detection on the whole Signal**
 - ◆ Global Descriptor
 - ◆ Local Descriptor
- **Feature Extraction/Detection on Objects**
 - ◆ Object Localization / Extraction
 - ◆ Object Characterization
- **Interest of Multi-Resolution**
- **Using Features**

- Graph Representation
 - ◆ Organization of Objects
 - ◆ Example: Adjacency Graph

■ Classification Methods

◆ Features are input of

- ◆ Classifiers
- ◆ HMM
- ◆ ...

■ Recognition Systems

◆ Strategy

- ◆ Bottom-up
- ◆ Top-down
- ◆ Mix
